

VISO BUMPER

Aneroid sphygmomanometer with large dial and protection

Viso Bumper is a high quality sphygmomanometer which distinguishes itself for its interesting quality/price ratio. It is particularly large and stable and with no problem it will make a mark in daily rescue and transport activities. The ABS wall support is extraordinarily strong and thanks to a simple mechanism, it allows wide rotation. But Viso Bumper goes further because it has been projected to equip ambulances; the outer shell is an assuring element made of unbreakable material based on shockproof thermoplastic rubber resistant both to bumps and bangs and to chemical products. We have also reserved a space on the outside to personalize this instrument in a permanent way.

Single packaging in cardboard box printed using a four-coloured process.

Spencer also offers a wide range of cuffs in different sizes.

The 10 G version is available.

The structure of Viso Bumper is made of ABS but to protect the sophisticated and precise mechanism, we have equipped it with a special shell that guarantees a long lasting, easily cleaned, device.

A spacey basket made of strong ABS for cuff and tube in the back of the instrument. Easy to clean. It allows neat storage of your accessories neatly in order and to have them always with you.

Thanks to a special space within the mould shell, you can personalize the Viso Bumper with your name or logo.

components:

- A gauge
- A cuff
- A manual inflatable bulb with valve
- Fixation elements

TECHNICAL DATA

Dimensions Dial:	Ø 146 mm
