

CHALECO TES

EB02.050

Emergency Vest

Developed to be used in sanitary interventions, fire, vehicle´s release, rescue, identification of operational controls, among others. Developed in mesh fabric with a high visibility reflective band throughout its periphery. It has two external front pockets for diagnostic and intervention material, two large capacity internal flat pockets, internal rear compartment for a hydration bag and anterior, posterior and lateral MOLLE system for the attachment of additional medical and / or tactical material.

Features

- Peripheral reflective bands to quickly identify the silhouette of the rescuer.
- Front, rear and side MOLLE systems to anchor various material.
- Inside rear pocket for the placement of the hydration bag with hole for the extraction of the hose.
- Two external front pockets for intervention material and rescue scissors.
- Two large capacity internal front pockets for plans, documents or intervention material.
- Rear handle that facilitates the extraction of injured personnel.
- Double identification system on the back through velcro patches.
- Made of breathable mesh to neutralize the external temperature.
- Shoulder and back adjustment systems to adapt to all sizes.
